

Ayomikun Festus-Olaleye

Software Engineer • Modern Web & AI Systems

Karlskrona, Sweden | (+46) 76 264 0140 | ayomikunolaleye@gmail.com

[Portfolio](#) [LinkedIn](#) [GitHub](#) [FFSD Travels](#)

Summary

Software Engineer specialised in designing and developing scalable, production-ready web applications and API-driven systems using modern full-stack technologies including React, TypeScript, Node.js, and modern frontend ecosystems. Strong focus on maintainable architecture, reusable component systems, performance optimisation, testing strategies, and modern software engineering best practices.

Experienced in building responsive and interactive user interfaces, integrating REST APIs, implementing Redux-based application state management, and contributing to scalable frontend architecture. Skilled in modern development tools and workflows including Docker, Git, Netlify, Jest, and Cypress to support efficient and maintainable software delivery.

Additionally experienced in applied AI workflows, prompt engineering, and leveraging LLM-based tools such as GPT-4 and Claude to improve productivity, problem-solving, debugging, and software development processes. Currently completing a Master's degree in Software Engineering at Blekinge Institute of Technology, with interests in software architecture, quality engineering, applied AI, and scalable software systems.

Skills

Languages: TypeScript, JavaScript, Python, Java

Frontend Technologies: React, Redux, HTML5, CSS3, Tailwind CSS, Shadcn UI, Angular

Testing & Quality Engineering: Jest, Cypress

Backend & Databases: Node.js, MongoDB, SQL Server

Tools & Platforms: Git, GitHub, Docker, Netlify, CI/CD Concepts, Agile (Scrum), Figma

Software Engineering: REST APIs, Modular Design, Clean Architecture, Scalable Systems, Performance Optimisation

AI & Machine Learning: LLMs (GPT-4, Claude), NLP, Prompt Engineering

Professional Experience

Web Developer (Frontend-Focused)

Dec 2023 – Aug 2024

Financial, Forensic Studies & Diagnostic LTD (FFSD), Lagos, Nigeria

- Designed and implemented scalable frontend architecture using React, TypeScript, and modular component-based development practices.
- Developed responsive and dynamic user interfaces integrated with REST APIs to support real-time booking workflows and interactive system features.
- Implemented Redux-based global state management for user sessions, booking processes, and complex application state consistency.
- Built reusable UI component systems with Shadcn UI and Tailwind CSS to improve maintainability, design consistency, and development efficiency.
- Applied performance optimisation techniques including lazy loading, code splitting, and efficient state handling to improve application responsiveness.
- Contributed to debugging, refactoring, and code reviews to support maintainable and scalable frontend engineering practices.
- Used Docker-based development environments and Git workflows to improve development consistency and team collaboration.

- Worked within agile development teams, collaborating with designers and stakeholders to deliver iterative software features.
- Leveraged AI tools including GPT-4 and Claude to support problem-solving, debugging, development productivity, and technical research workflows.
- Applied frontend testing and validation practices to improve UI reliability, maintainability, and user experience quality.

Frontend Engineer (Junior Software Engineer)

Jan 2023 – Nov 2023

Pedistack (Remote)

- Developed reusable and modular UI components using React and JavaScript for responsive web applications.
- Integrated REST APIs and implemented Redux state management to support interactive and data-driven user experiences.
- Improved application responsiveness and UI consistency across desktop and mobile devices.
- Collaborated within agile software development teams during sprint planning, iterative development, and feature delivery cycles.
- Participated in debugging, testing workflows, and frontend quality improvement activities.
- Utilised Git-based workflows and collaborative development practices within remote engineering teams.

Frontend Developer (Intern)

Apr 2021 – Sep 2021

PricewaterhouseCoopers (PwC), Lagos, Nigeria

- Developed responsive enterprise UI components using Angular for internal business applications.
- Collaborated with product and QA teams to align frontend development with business and testing requirements.
- Assisted with testing cycles, UI improvements, technical documentation, and frontend maintenance workflows.

Projects

FFSD Travels — Travel Booking Platform

[Live Demo](#)

- Built a responsive travel booking platform using React, TypeScript, Redux, and REST APIs.
- Developed dynamic search, filtering, and API-driven workflows for interactive booking experiences.
- Implemented reusable component systems with Shaden UI and Tailwind CSS for scalable frontend development.
- Applied performance optimisation techniques including lazy loading and modular state management strategies.
- Supported maintainable deployment and frontend engineering workflows using Git and modern development tooling.

Education

Master's in Software Engineering

Sep 2024 – Jun 2026 (Expected)

Blekinge Institute of Technology — Karlskrona, Sweden

Thesis: Evaluating Generative AI as a Support for the Detection of Practically Relevant Requirements Smells

Relevant Coursework: Software Architecture, Software Quality, Software Testing, Applied AI, Software Metrics

Bachelor of Technology, Computer Science

Sep 2018 – Aug 2022

Bell University of Technology — Ogun State, Nigeria

Second Class Honours | CGPA: 3.43/5.0

Awards & Certifications

Microsoft SQL Server (2022) • Java Programming (2022) • Microsoft Office Specialist (2022) • SQL Server Administrator (2020)

Languages

English — Professional Proficiency (C1)
