

Ayomikun Festus-Olaleye

SOFTWARE ENGINEER · FULL-STACK WEB DEVELOPMENT

📍 Karlskrona, Sweden 📞 (+46) 76 264 0140 ✉ ayomikunolaleye@gmail.com
🌐 GitHub 🔗 linkedIn 🌐 Portfolio

Full-Stack Software Engineer with 4 years building and shipping production web applications. Built ReqSmell (MSc thesis), a full-stack AI tool with a React/TypeScript frontend and a Python/FastAPI backend orchestrating 4 concurrent Claude and GPT-4 pipelines, with GitHub Actions CI enforcing 80% coverage, mypy strict, and TypeScript strict mode. FFSD Travels also shipped a live travel booking platform (Lighthouse 62 → 91). Previously at PricewaterhouseCoopers. MSc Software Engineering, Blekinge Institute of Technology (2026).

SKILLS

Languages

TypeScript, JavaScript (ES6+), Python, Java

Frontend

React, Redux, Angular, HTML5, CSS3, Tailwind CSS, Shadcn UI

Testing & QA

Jest, Vitest, Cypress

Backend & APIs

Python, FastAPI, Pydantic v2, Node.js, REST APIs

Databases

MongoDB, SQL Server, PostgreSQL

DevOps & Tools

Git, GitHub, Docker, Netlify, CI/CD, Figma

Engineering

Modular Design, Clean Architecture, Performance Optimisation, Agile (Scrum)

AI & ML

LLM Orchestration, Claude API, OpenAI API, Prompt Engineering

EDUCATION

MSc Software Engineering Sep 2024 – Jun 2026

Blekinge Inst. of Technology, Sweden

Thesis: AI-assisted detection of Requirements Smells

Courses: Software Architecture, Software Quality, Applied AI, Software Metrics

BTech Computer Science Sep 2018 – Aug 2022

Bell University of Technology, Nigeria

Second Class Honours | CGPA: 3.43/5.0

CERTIFICATIONS

- Microsoft SQL Server (2022)
- Java Programming (2022)
- Microsoft Office Specialist (2022)
- SQL Server Administrator (2020)

LANGUAGES

EXPERIENCE

Software Engineer (Web Developer)

Lagos, Nigeria

FINANCIAL, FORENSIC STUDIES & DIAGNOSTIC LTD (FFSD)

Dec 2023 – Aug 2024

- Delivered FFSD Travels, a production travel booking platform serving real end users by leading the end-to-end frontend system design in React and TypeScript, defining component architecture, data-flow patterns, and integration contracts across 5+ third-party REST APIs.
- Eliminated a recurring class of UI inconsistency bugs, measured by zero design-regression reports in the final two release sprints, by engineering a reusable component library of 30+ components with Shadcn UI and Tailwind CSS adopted as the single source of truth across the codebase.
- Improved Lighthouse performance score from 62 to 91 by applying lazy loading, route-based code splitting, API response caching, and memoisation across a Redux-managed, microservices-integrated frontend.
- Raised frontend test coverage from 0% to 70% by introducing Jest unit tests and Cypress end-to-end tests across critical booking, search, and checkout flows.
- Standardised the deployment pipeline and eliminated environment drift by containerising the development environment with Docker and automating cloud deployment via Netlify's CI/CD pipeline.
- Accelerated debugging and research velocity by integrating AI-assisted workflows (GPT-4, Claude) into daily engineering practice, reducing sprint blocker resolution time.

Software Engineer (Frontend Engineer)

Remote

PEDISTACK

Jan 2023 – Nov 2023

- Reduced code duplication across the product's feature modules, measured by a shared component library of 20+ components adopted across 4+ product areas, by building modular, reusable React components with consistent design patterns.
- Improved data reliability for user-facing features, measured by a reduction in stale-state and race-condition bugs reported by QA, by implementing Redux state management with structured action patterns and REST API integrations.
- Improved cross-device UI consistency, reducing reported UI layout bugs by 25%, by applying responsive design practices across desktop and mobile breakpoints.
- Delivered features consistently across sprint cycles by participating in agile planning, standups, and retrospectives in a fully remote engineering team.

Frontend Developer (Intern)

Lagos, Nigeria

PRICEWATERHOUSECOOPERS (PwC)

Apr 2021 – Sep 2021

- Delivered enterprise Angular UI components meeting PwC's compliance and accessibility standards, measured by QA sign-off within sprint timelines, by collaborating across product, QA, and backend teams.
- Contributed to UI testing cycles and technical documentation, supporting frontend quality standards within a large, structured engineering organisation.

English

Professional Proficiency (C1)

PROJECTS

ReqSmell AI Requirements Analysis Tool (MSc Thesis)

reqsmell.netlify.app

REACT 18 · TYPESCRIPT · REDUX · PYTHON · FASTAPI · CLAUDE API · GPT-4 ·
PYTEST · GITHUB ACTIONS 2025 – 2026

- Built a full-stack AI research tool from scratch, measured by a live deployment product used for MSc thesis evaluation, by designing a React/TypeScript SPA frontend and a Python/FastAPI backend as two independently versioned services.
- Engineered 4 concurrent async LLM analysis pipelines (Claude + GPT-4 × ambiguity + inconsistency), measured by fault-isolated execution where one pipeline failure never affects the others, by architecting an asyncio-based orchestration layer with per-pipeline progress tracking and structured JSON response validation via Pydantic v2.
- Enforced production-grade code quality across both codebases, measured by CI gates requiring 80% backend test coverage, mypy strict mode, ruff linting, and TypeScript strict mode (zero **any**), by building GitHub Actions pipelines that block any PR failing type-checking or tests.
- Delivered client-side PDF report generation, measured by downloadable multi-page comparison reports with statistics and charts produced without any server-side rendering, by integrating jsPDF and html2canvas into a Redux-connected reporting pipeline.

FFSD Travels (Travel Booking Platform)

ffsdtravels.com

REACT · TYPESCRIPT · REDUX · REST APIs · TAILWIND CSS · NETLIFY CI/CD2023 – 2024

- Architected the full frontend: feature-based folder structure, Redux slice pattern for isolated state modules, and a REST API service layer decoupling UI components from data-fetching logic.
- Improved Lighthouse score from 62 to 91 and reduced unnecessary API calls by 60% through debounced queries, lazy loading, and route-based code splitting.
