

# Ayomikun Festus-Olaleye

Software Engineer | Full-Stack | AI/LLM Systems

Nässjö, Sweden | +46 76 264 0140 | ayomikunolaleye@gmail.com

GitHub: github.com/Mikun07 | LinkedIn | Portfolio: festus-olaleye-ayomikun.netlify.app

## Professional Summary

Software Engineer who raised a live product's Lighthouse score from **62 to 91**, cut its API call volume by **60%**, and took test coverage from **0% to 70%**. 4+ years building software, 2+ in professional Agile teams (React/TypeScript, Python/FastAPI, Node.js). Currently engineering fault-isolated LLM pipelines (Claude, GPT-4) behind an 80% CI coverage gate while completing an MSc in Software Engineering at Blekinge Institute of Technology (defence September 2026). Nässjö, Sweden; available at one week's notice.

## Technical Skills

- **Languages:** TypeScript, JavaScript (ES6+), Python, Java, SQL
- **Frontend:** React.js, Redux Toolkit, Angular, Vue 3, Tailwind CSS, Shadcn UI, HTML5, CSS3, Responsive Design
- **Backend & Data:** Node.js, Express, FastAPI, Pydantic v2, REST, GraphQL, PostgreSQL, MongoDB, MySQL, SQL Server
- **DevOps & Observability:** Docker, Container Orchestration (Azure Container Apps), GitHub Actions CI/CD, Git, Azure, Netlify, Structured Logging, Correlation-ID Tracing, Azure Monitor
- **Testing & QA:** Jest, Vitest, Pytest, Cypress, Playwright, Supertest, k6, TypeScript Strict Mode, mypy Strict Mode
- **Methods & AI:** Agile/Scrum, Code Review, Requirements Engineering, Clean Architecture, Event-Driven Architecture, STRIDE Threat Modelling, GDPR, WCAG, LLM Orchestration, Claude API, OpenAI GPT-4 API

## Experience

### Software Engineer, MSc Thesis Research (ReqSmell)

Blekinge Institute of Technology | AI Requirements Analysis Tool (live demo)

Jan 2025 – Present

Karlskrona, Sweden

- **Zero cross-pipeline contamination** across 4 concurrent LLM analysis pipelines (Claude API, GPT-4), verified in the thesis evaluation, achieved through fault-isolated asyncio orchestration in FastAPI.
- **Zero type errors reach main:** every pull request gated behind 80% Pytest coverage, mypy strict mode, and Ruff linting in a GitHub Actions CI/CD pipeline I built.
- Live in production as two independently deployed services with independent release cycles: a React 18/TypeScript SPA and a FastAPI backend.

### Software Engineer

FFSD Group (Financial, Forensic Studies & Diagnostic Ltd), 11–50 employees | left to pursue MSc

Dec 2023 – Aug 2024

Lagos, Nigeria

- Sole owner of the frontend of DQV, FFSD's document qualification and verification platform: architecture, UI/UX design, custom component library, testing, documentation, and deployment to production (React, TypeScript, Redux).
- **Lighthouse score 62 to 91** (a 47% gain) on the live deployment through lazy loading, route-based code splitting, and client-side response caching, delivered in two-week Agile sprints.
- **60% fewer production API calls**, verified through network profiling, by introducing debounced search and a request-level response cache in the Redux state layer.
- **Test coverage 0% to 70%** (Jest and Cypress reports) by authoring unit and end-to-end tests across DQV's document upload, verification, and search workflows.
- Backend provider swapped with **zero UI changes**, proven during an integration replacement, by decoupling the UI from 5+ third-party REST integrations behind a typed service layer.
- **Zero design-regression QA tickets** in the final two Scrum sprints after building a reusable 30+ component library (GDPR and WCAG compliant); mentored junior developers through code review.

### Software Engineer (Fixed-Term Contract)

Pedistack, fintech startup of 7–8 people | contract concluded on schedule

Jan 2023 – Nov 2023

Remote

- Eliminated recurring stale-state and race-condition defects (tracked in defect reports) by introducing structured Redux action patterns and typed REST API integrations.
- **25% fewer reported UI layout bugs**, measured by QA ticket volume, by enforcing responsive design standards across desktop and mobile breakpoints.
- Built the team's shared library of 20+ React components, the single source of UI logic across 4+ product areas, cutting code duplication for the whole Agile team.

**Independent Software Engineer**  
*Self-Directed Engineering Projects*

**Oct 2021 – Dec 2022**  
*Remote*

- Shipped MikunStore (e-commerce, React 18, Vite): full purchase funnel covered end to end in Cypress, from browsing through checkout to client-side PDF receipts.
- Built CineVault (movie discovery, Redux Toolkit): **zero TypeScript strict-mode violations** across all TMDB API response shapes via a fully typed data layer.

**Software Engineer Intern**  
*PricewaterhouseCoopers (PwC)*

**Apr 2021 – Sep 2021**  
*Lagos, Nigeria*

- Shipped enterprise Angular UI components to PwC compliance and accessibility standards, with QA sign-off inside every sprint.

## Projects

**MikunAir: Full-Stack Flight Booking Application**

**2025 – 2026**

*React 18, TypeScript, Apollo Client, Node.js, Express, GraphQL, Drizzle ORM, PostgreSQL, Zod, Vitest, Playwright, Docker, Azure*

- **Prevented overbooking under concurrent load** by serialising seat decrements with PostgreSQL SELECT FOR UPDATE inside a transaction; proven by an integration test firing two simultaneous requests at the last seat, with exactly one success.
- Designed a stateless modular monolith (microservices evaluated in documented ADRs) scaling horizontally from 0 to 3 replicas on Azure Container Apps, with Azure Database for PostgreSQL and Key Vault secrets.
- Built a dual-protocol API: flight search over GraphQL (Apollo Server, depth limit 5), all mutations over REST with Zod validation, every response projected through explicit DTOs.
- **P95 latency under 2 seconds at 100 concurrent users** (k6 load tests); correctness verified by 44 unit tests and 13 integration scenarios against a real PostgreSQL instance in CI.

**IncidentTrack: Incident Management and Reliability Platform**

**2026**

*React, TypeScript, Tailwind CSS, Node.js, Express, Prisma, PostgreSQL, JWT, Docker, GitHub Actions*

- Modelled the incident lifecycle as a validated state machine (open, investigating, mitigated, resolved, reviewed) with role-based access control and audit logging of sensitive actions, enforced at the API layer.
- Built postmortem workflows (root cause, impact, corrective actions) and reliability metrics including incident counts, mean time to resolve, and recurring-cause analysis across services.
- Designed the PostgreSQL schema with Prisma, using database constraints to protect integrity across incidents, services, and action items; containerised with Docker and gated by GitHub Actions CI.

## Education

**MSc Software Engineering**  
*Blekinge Institute of Technology*

**Sep 2024 – Expected Sep 2026**  
*Karlskrona, Sweden*

- Thesis: AI-assisted Detection of Requirements Smells (defence September 2026). Courses: Software Architecture, Applied AI, Software Metrics, Software Quality.

**B.Tech. Computer Science**  
*Bell University of Technology | Second Class Honours, CGPA 3.43/5.0*

**Sep 2018 – Aug 2022**  
*Nigeria*

## Certifications & Languages

Microsoft SQL Server (2022) | SQL Server Administrator (2020) | English: Professional Proficiency (C1)
